

CRANE REPAIRS OFF-SITE

IPS provides a running repair service at our Duluth, MN facility. These "mini rebuilds" usually take about 3 to 8 weeks depending on the repairs and upgrades that are to be performed.

IPS will provide price and time frame estimates prior to beginning any work, and provide regular updates throughout the course of the project. This service can breathe new life into a tired piece of equipment without the cost and time commitment of a full rebuild.

Our highly trained staff and huge selection of in stock parts allows for a multitude of repairs and upgrades to be completed in a very short amount of time.
